
TAXA (261,265 feature pairs)
FUNCTIONS (109,596 feature pairs)
COMBINED (716,236 feature pairs)
Total IG of the pair minus the sum of the two individual IGs
Sum of the two individual (1D) IGs
G. morbillorum + S. mitis
SUPER-ADDITIVE
pair tells more than the two features together
ADDITIVE
the partner adds its full own information
OVERLAPPING
part of the partner's information
is already in the base feature
F. nucleatum + P. stomatis
D. pneumosintes + P. micra
P. micra + P. stomatis
never synergistic (n=162,387)
synergistic (significant gain over the base feature) (n=92,586)
super-additive (more than the two features together) (n=6,292)
additive (total = sum)
chance threshold (+5.2 bits)
never synergistic (n=12,699)
synergistic (significant gain over the base feature) (n=91,577)
super-additive (more than the two features together) (n=5,320)
additive (total = sum)
chance threshold (+5.0 bits)
never synergistic (n=295,349)
synergistic (significant gain over the base feature) (n=398,610)
super-additive (more than the two features together) (n=22,277)
additive (total = sum)
chance threshold (+5.1 bits)
